

Connect data by lot to clarify the operating question

A framework for lot, test data, 4M1E, quality, WIP and cost close.

Lot · test · quality · WIP · cost close

Start with the question that needs tracing

A useful discussion starts by identifying which records are disconnected and who needs to see what.

LOT GENEALOGY

Track lot flow, splits/merges and each handoff.

TEST DATA

Review test results alongside lot and quality in context.

4M1E CONTEXT

Review people, machines, materials and methods around the tracing question.

COST CLOSE

Bring shopfloor and finance data into the same cost-close discussion.

Which data source? What context is missing? Who is responsible? Which review step needs clarification?

A reviewable data thread

Connect data points around the operating question, from input through context to review.

01 · INPUT	02 · CONTEXT	03 · REVIEW
Lot Test	4M1E Quality	WIP Cost close

Review lot, test, quality, WIP and cost close in one cadence.

From lot to operating evidence

Each data layer answers part of the question, from lot position through test and WIP to cost close.

Layer	Question	Review point
Lot	Where is the lot and which points has it passed?	Genealogy / split-merge
Test	How do results relate to lot and quality?	Context / anomalies
WIP	Where is work waiting, and who needs to know?	Handoff / ownership
Cost	Which data are needed for cost close?	Shopfloor / finance review

HANDOFF

Clarify the data source, owner and confirmation condition at each review step.

A review cadence can start small

Choose one operating issue, identify records to connect, then agree on a next step that fits current conditions.

01

Choose a question

For example, trace a lot, review test data or clarify cost close?

02

Identify records

Note the source, context, owner and missing points.

03

Agree next step

Confirm the action, owner and acceptance condition.

Review prompts

Which data sources need visibility?

Who receives an alert or takes action?

What condition confirms the next step?

What still needs confirmation?

Discuss an OSAT operating question

Start with a specific operating issue. Do not send production data, customer records or sensitive information through the page.
